Student Names	Josh Agulo, John Dave Dagunsa, Mico Grande, Keshia Jardiel, John Robin Lumanas, Rowie Managbanag, Churlz Rosalada
Module:	#2 Networking & Events
Schedule:	4 - 111 (MW 9:00AM - 10:30AM) | 4-112 (F 11:30AM - 1:30PM)
Activity #10:	The Alumni Hub High-Fidelity Prototype Sprint
Objectives:	To synthesize gallery walk insights into a professional, brand-compliant mobile prototype, followed by a cross-class "blind" usability audit.

User Screens:

Alumni Login	Bea Christina Cale	
Alumni cannot access official services because there is no centralized alumni platform login.	
A secure login allows verified alumni to access networking and event services.	
As an alumni, I want to securely log in to the alumni platform so that I can access official networking and event features.	
Act as a Senior UX Designer. Design a mobile login screen for a University Alumni Networking & Events app. The screen must include university logo, email field, password field, login button, and a “Forgot Password” option. The layout should be simple, clean, and easy for first-time alumni users to understand. After successful login, the user proceeds to the Home Dashboard.	

Alumni Verification 1	Bea Christina Cale	
Unverified users and outsiders may enter alumni communities, making networking unreliable.	
Only verified graduates can access the platform.	
As an alumni, I want to verify my graduate identity so that I can join an exclusive alumni network.	
Act as a Senior UX Designer. Create a mobile alumni verification and registration form for a university alumni app. The screen must collect full name, student ID, course, batch year, graduation year, and allow document upload for proof of graduation. The layout should guide users step-by-step and clearly show that verification is required before accessing the platform.	

Alumni Verification 2	Bea Christina Cale	
Unverified users and outsiders may enter alumni communities, making networking unreliable.	
Only verified graduates can access the platform.	
As an alumni, I want to verify my graduate identity so that I can join an exclusive alumni network.	
Act as a Senior UX Designer. Create a mobile alumni verification and registration form for a university alumni app. The screen must collect full name, student ID, course, batch year, graduation year, and allow document upload for proof of graduation. The layout should guide users step-by-step and clearly show that verification is required before accessing the platform.

Profile

My Alumni Profile	Bea Christina Cale	
There is no official record showing alumni achievements and participation.	
A profile page displays identity, verification, and event badges.	
As an alumni, I want a profile page showing my information and participation badges so that I have an official alumni identity.	
Act as a Senior UX Designer. Design a mobile alumni profile screen. The profile must display profile photo, course, batch year, job position, country, verified badge, and earned event participation badges. Include an edit profile option. The design should resemble a professional networking profile and be easy to read.	

Home Dashboard	
Bea Christina Cale	
Facebook groups are inactive and announcements are disorganized.	
A centralized dashboard organizes networking and events.	
As an alumni, I want a home dashboard where I can quickly access networking, events, and announcements.	
Act as a Senior UX Designer. Create a mobile home dashboard for an alumni networking app. The dashboard must show upcoming events, alumni search shortcut, official announcements, and community posts. Use card-based sections and bottom navigation. This screen serves as the main hub after login.	
Alumni Directory	Bea Christina Cale	
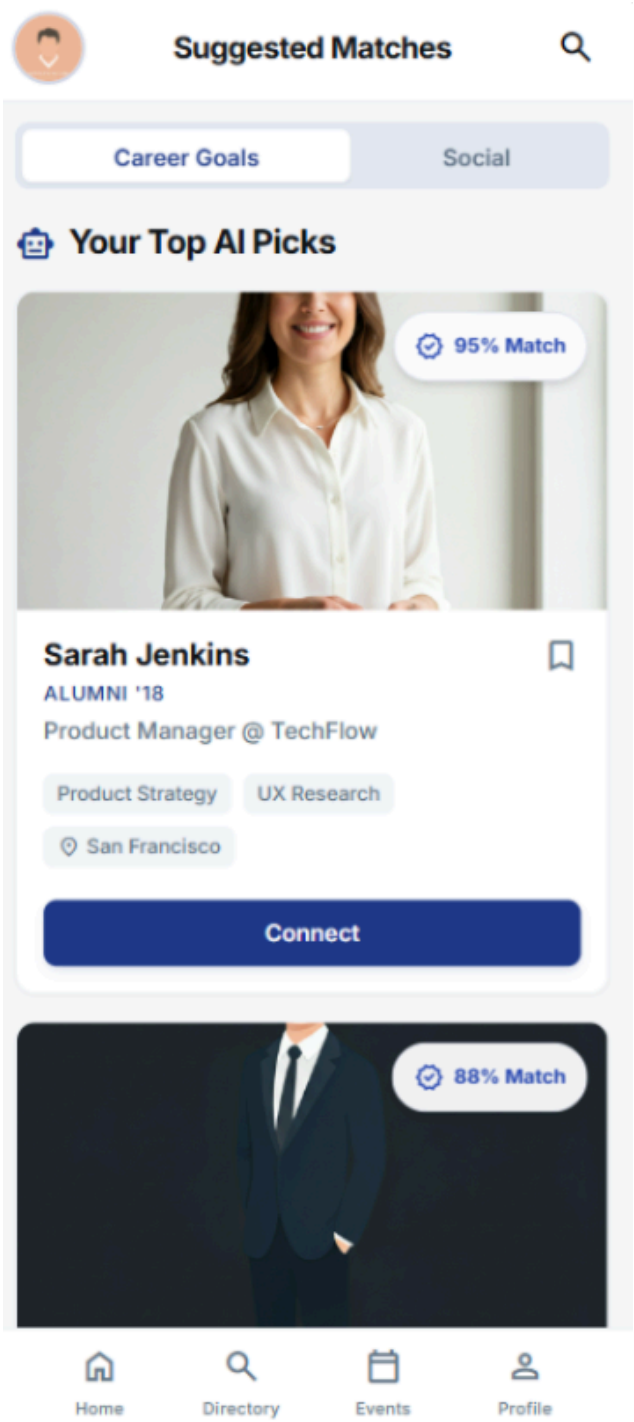
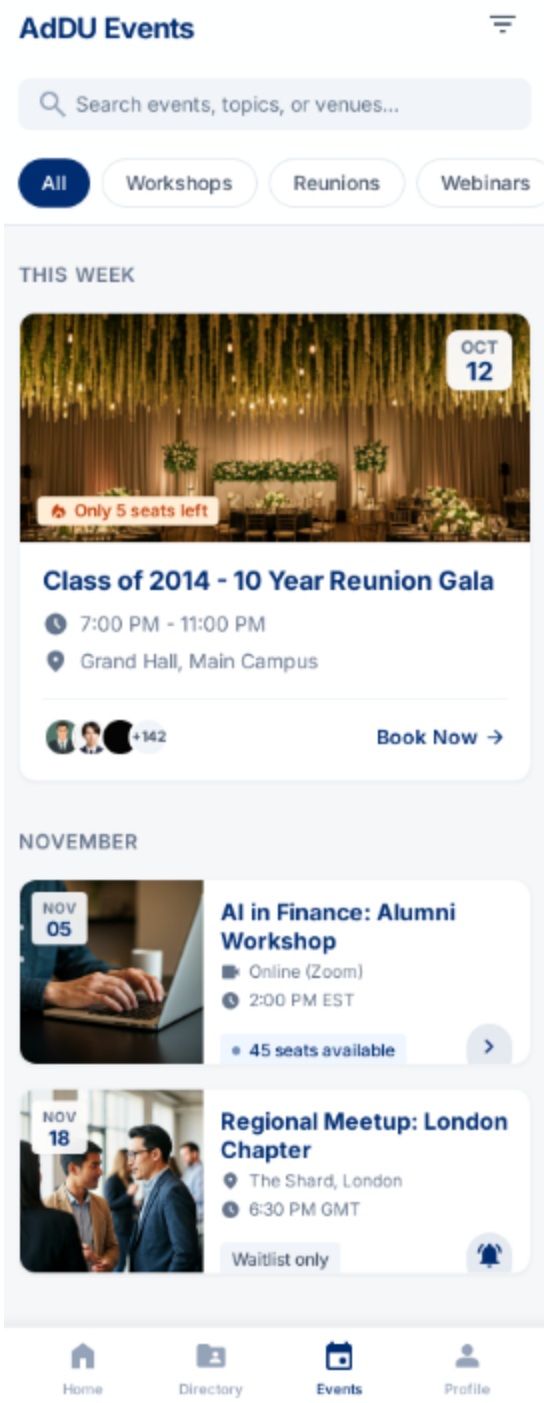
I cannot find alumni working in my industry.	
Users can search alumni using filters.	
As an alumni, I want to search other alumni by course, batch year, profession, and location so I can build professional connections.	
Act as a Senior UX Designer. Design an alumni directory screen with search and filter tools. Include filters for course, batch year, profession, industry, and country. Display results in profile cards with name, job, and verified badge. Tapping a card opens the alumni profile view.	

AI Matchmaking Feed
Josh Clarence R. Agulo
Graduation felt like the end of my university family. Facebook groups are dead or spammy, I feel professionally isolated, missing the camaraderie and advice that helped me early on.
AI-matched networking based on My Profile (skills, career goals, location). Curated events (virtual & in-person) that feel like coming home to the Blue Knight community again.
As an alumni seeking professional connections, I want AI-curated match recommendations that analyze my profile data, so that I can discover and connect with alumni who share similar career paths, skills, and goals without the spam and noise of traditional social media.
Mobile app UI design for a professional networking platform. Top navigation with two tabs. A section titled 'Your Top AI Picks' featuring a clean profile card. The card includes a professional headshot, a percentage match badge, job title, skill tags, and a prominent 'Connect' button. Minimalist aesthetic, soft shadows, modern sans-serif typography, blue and white color palette.



Upcoming Events List
Josh Clarence R. Agulo
Missing important alumni events because notifications are unreliable and I forget to check scattered groups.
Personalized event calendar synced to phone, smart notifications based on my profile preferences, never miss out again.
As an alumni who wants to stay engaged with the community, I want a personalized event calendar with smart notifications based on my profile preferences, so that I never miss relevant alumni events and can easily manage my participation.
A mobile app UI design for a community events platform. The top features a search bar and segmented filters for event types like workshops and reunions. The main content area has sections grouped by time, such as 'This Week' and 'November'. The top event is presented in a large, detailed card with an image, date badge, event title, and availability tags. Below, subsequent events are listed in a more compact format. The design is clean and professional with a bottom navigation bar.



Admin Command Center

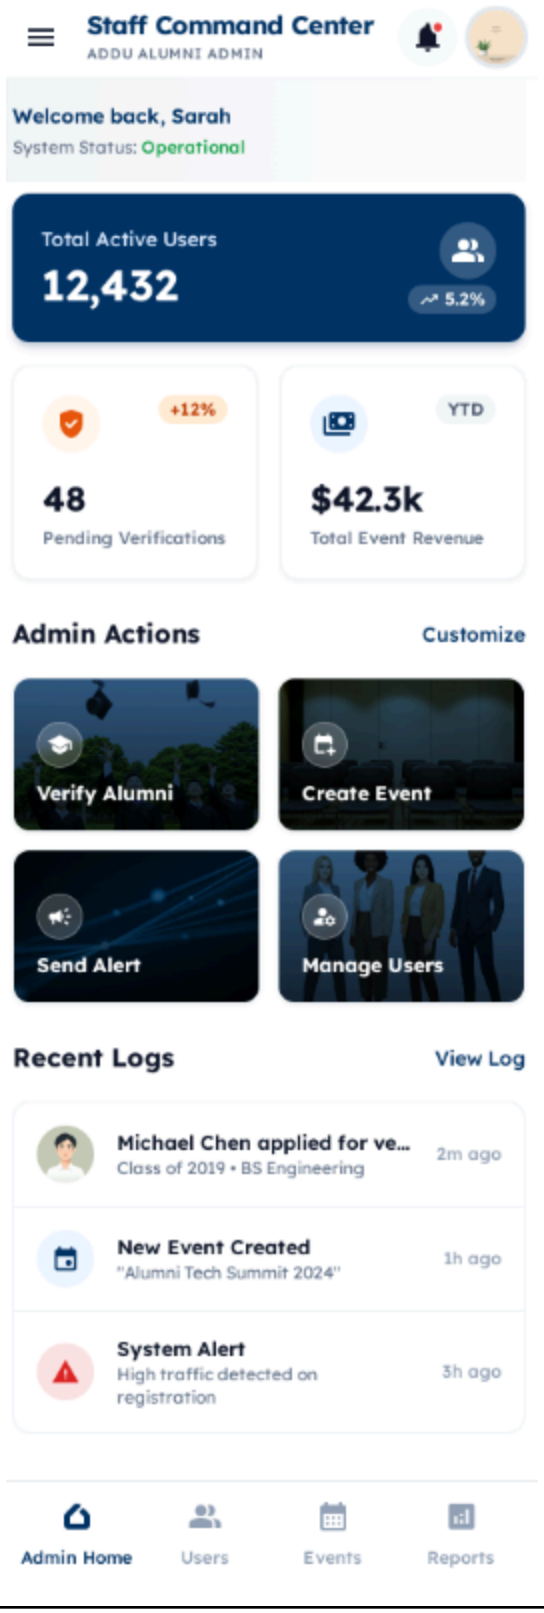
Shaira Lou Manibpel

Organizing every alumni event means juggling Google Forms for RSVPs, GCash for payments, and multiple spreadsheets for tracking, and I spend more time on admin than on actually making the event good.

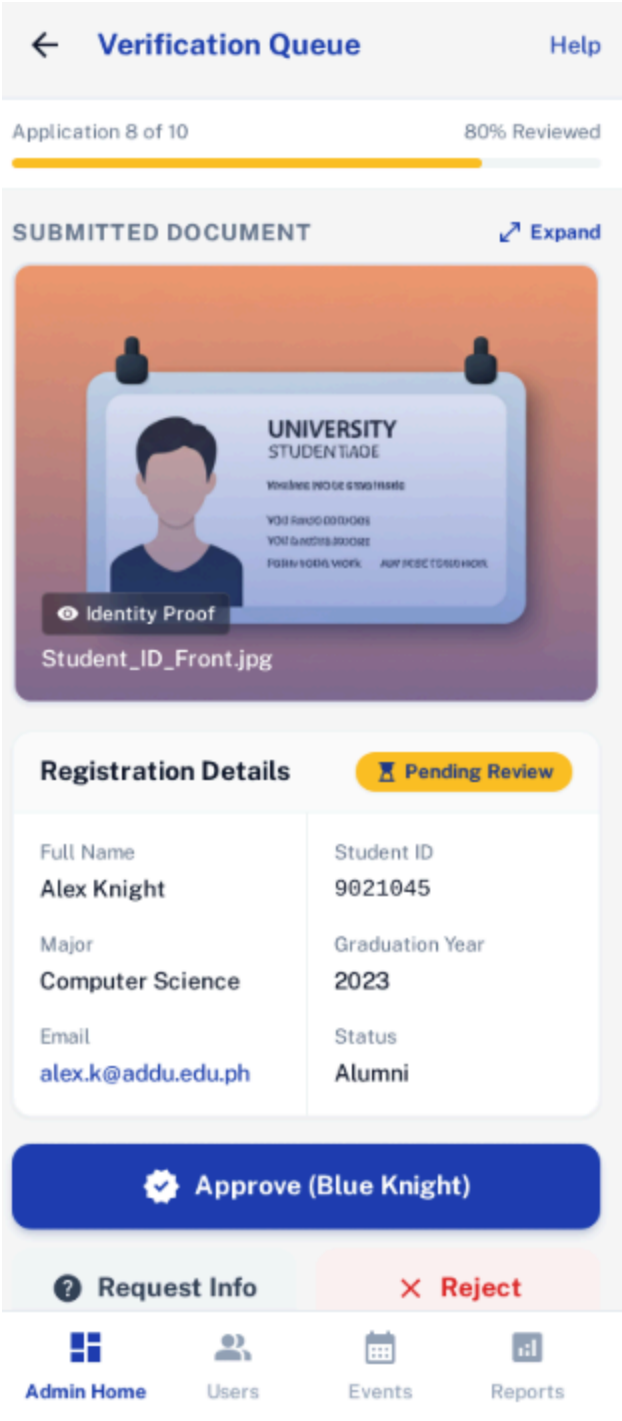
An all-in-one Event Manager lets me create events, collect payments, manage RSVPs, and export attendance reports from a single dashboard with zero spreadsheets.

As an alumni officer managing events, I want an all-in-one Event Manager dashboard that handles event creation, payment collection, RSVP management, and attendance reporting from a single interface, so that I can spend less time on admin and more time creating valuable event experiences.

A mobile app dashboard screen for an administrative professional. The top features a blue status header, followed by two clean white data metric cards with icons and numbers below it. A grid of large, distinct, image-based action buttons is centered on the screen. Below the grid, there is a section for recent event logs with profile avatars and text. The design is professional and minimalist, with a standard bottom navigation bar.



Verification Queue
Josh Clarence R. Agulo
Hard to maintain quality in networking, fake profiles or non-alumni crashing events.
All participants verified through My Profile university records, safe, authentic Blue Knight space.
As alumni staff committed to community quality, I want a verified community feature that prominently displays our verification standards and safety measures, so that all members feel confident that they are networking in a secure, authentic Blue Knight environment free from fake profiles.
Act as a Senior UX Designer. Design a mobile login screen for a University Alumni Networking & Events app. The screen must include university logo, email field, password field, login button, and a “Forgot Password” option. The layout should be simple, clean, and easy for first-time alumni users to understand. After successful login, the user proceeds to the Home Dashboard.



Data & Analytics Report	
Shaira Lou Manibpel	
Organizing every alumni event means juggling Google Forms for RSVPs, GCash for payments, and multiple spreadsheets for tracking, and I spend more time on admin than on actually making the event good..	
An all-in-one Event Manager lets me create events, collect payments, manage RSVPs, and export attendance reports from a single dashboard with zero spreadsheets.	
As an alumni officer managing events, I want an all-in-one Event Manager dashboard that handles event creation, payment collection, RSVP management, and attendance reporting from a single interface, so that I can spend less time on admin and more time creating valuable event experiences.	
A mobile app dashboard screen for an administrative professional. The top features a blue status header, followed by two clean white data metric cards with icons and numbers below it. A grid of large, distinct, image-based action buttons is centered on the screen. Below the grid, there is a section for recent event logs with profile avatars and text. The design is professional and minimalist, with a standard bottom navigation bar.	
Event Details	
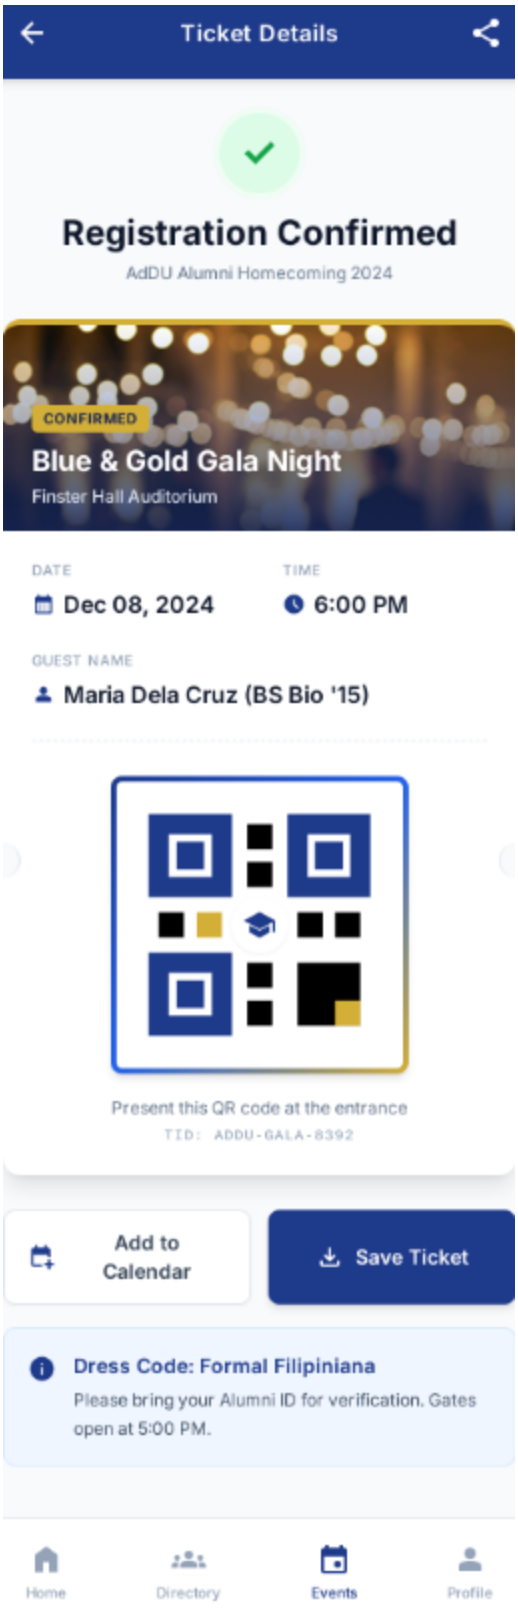
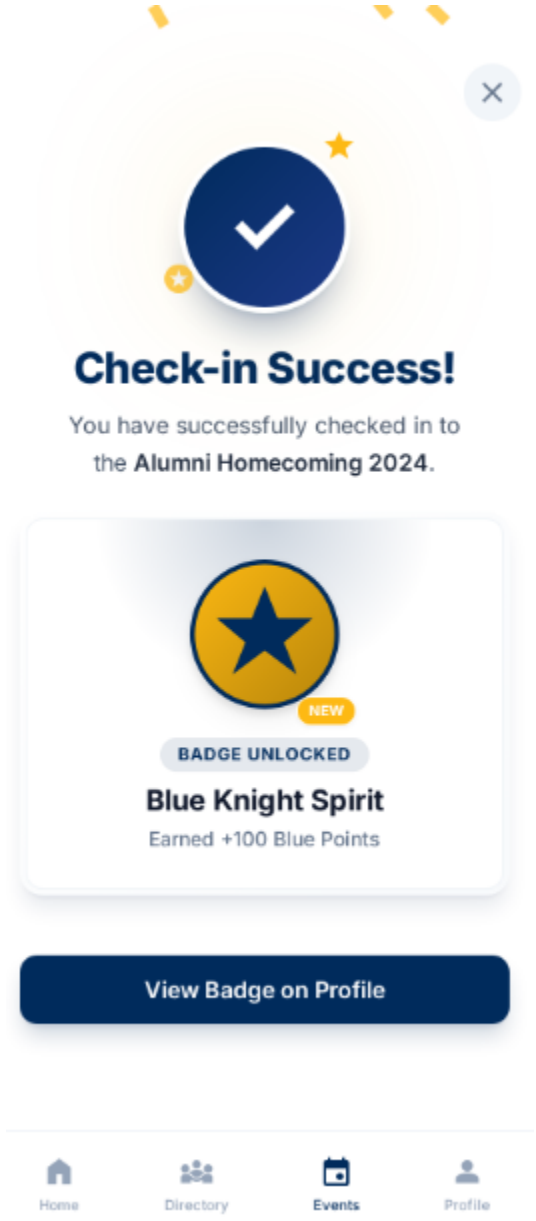
Bea Christina Cale	I registered before but never knew if I was included.	
A secure login allows verified alumni to access networking and event services.	
Clear event information and registration.	
As an alumni, I want to view full event details and register for the event. Act as a Senior UX Designer. Create a detailed event page for an alumni app. Include event description, schedule, venue, organizer, and available seats. Add a Register button and a Waitlist option if the event is full.	

Registration Confirmation
Bea Christina Cale
There is no confirmation after registering.
Instant confirmation and QR ticket.
As an alumni, I want a confirmation ticket so I know I am officially included in the event.
Act as a Senior UX Designer. Design an event registration confirmation screen that generates a QR code ticket. Display confirmation message, event information, QR code, and a calendar reminder button. This ticket will be used for event entry.



Event Check-in Success
Bea Christina Cale
Attendance is recorded manually and I have no participation record.
QR check-in automatically records attendance and awards a badge.
As an alumni, I want my attendance recorded so my participation appears on my profile.
Act as a Senior UX Designer. Create a mobile QR check-in success screen. After scanning the QR code, show a success confirmation, attendance recorded message, and a newly earned participation badge. Inform the user that the badge is now visible in their profile.



Mentorship Hub	
Bea Christina Cale	Alumni cannot access official services because there is no centralized alumni platform login, leading to a fragmented or inaccessible networking experience.	
A secure login allows verified alumni to access high-value networking opportunities, mentorship connections, and university-exclusive event services.	
As an alumni, I want to securely log in to the alumni platform so that I can access official networking and event features.	
Act as a Senior UX Designer. Design a mobile login screen for a University Alumni Networking & Events app. The screen must include university logo, email field, password field, login button, and a 'Forgot Password' option. The layout should be simple, clean, and easy for first-time alumni users to understand. After successful login, the user proceeds to the Home Dashboard.	

Find a Mentor	
Josh Clarence R. Agulo	
I want mentorship but don't know who to approach or how. Cold messaging strangers on LinkedIn feels awkward and ineffective.	
'Find a Mentor' feature with mutual interest matching and verified alumni status from My Profile, warm, safe, and meaningful.	
As a new alumni in my industry seeking mentorship, I want a structured mentorship matching feature that connects me with verified alumni mentors based on mutual interests and expertise, so that I can build warm, meaningful mentorship relationships without the awkwardness of cold outreach.	
Mobile app UI design for a 'Request Mentorship' screen. The top features a solid blue header with a back arrow and screen title, followed by a light blue sub-header. The main section includes a mentor profile card with a circular headshot, name, title, and an 'Availability' info box. Below this, there is a 'Warm Introduction' section with a text area for a personalized message and quick-topic selection tags. A highlighted 'Focus Areas' box provides additional context about the mentor. The screen concludes with a prominent blue 'Send Request' action button and a standard bottom navigation bar.	

Personalized Event Calendar	Josh Clarence R. Agulo	
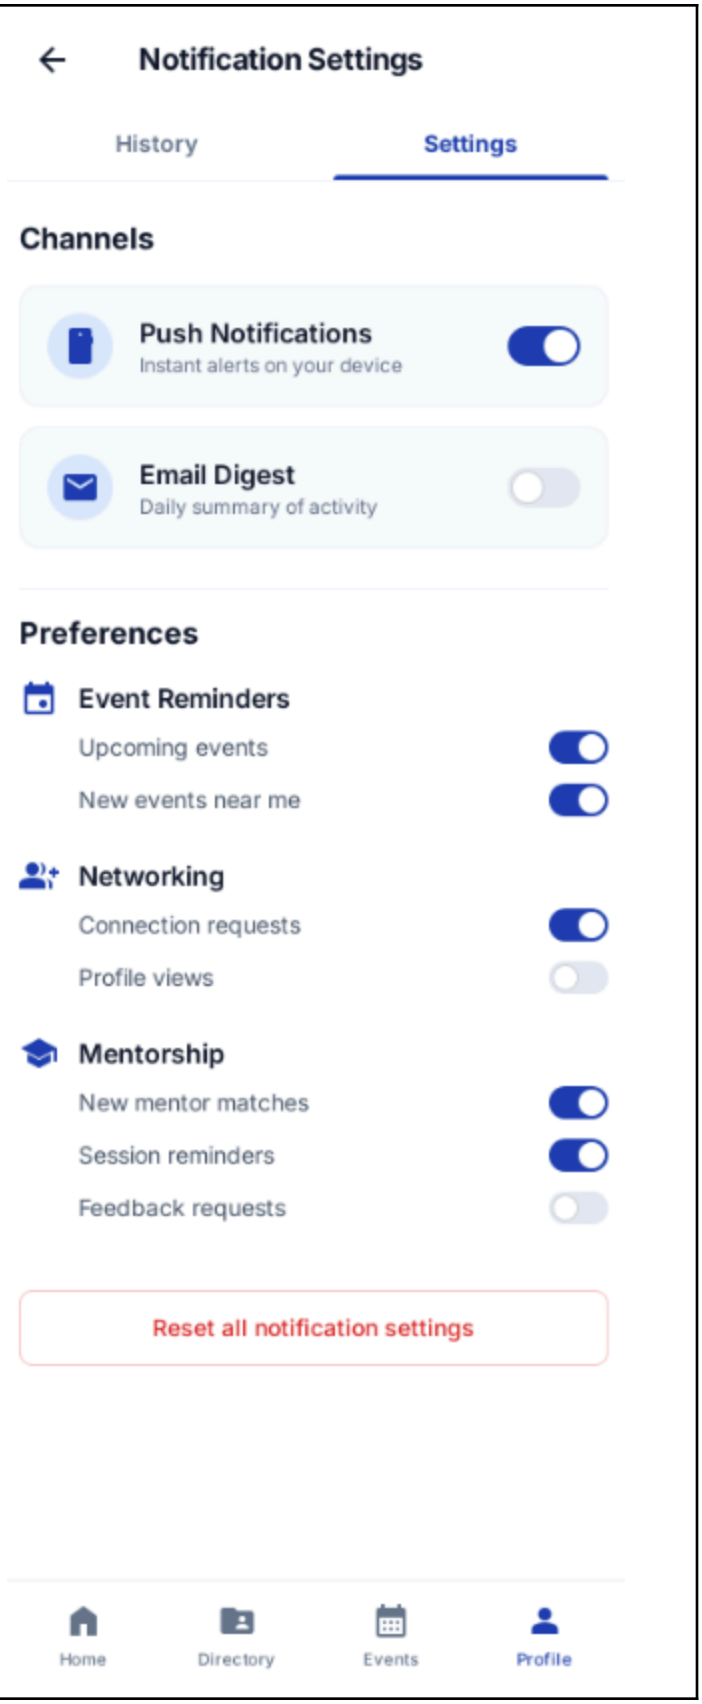
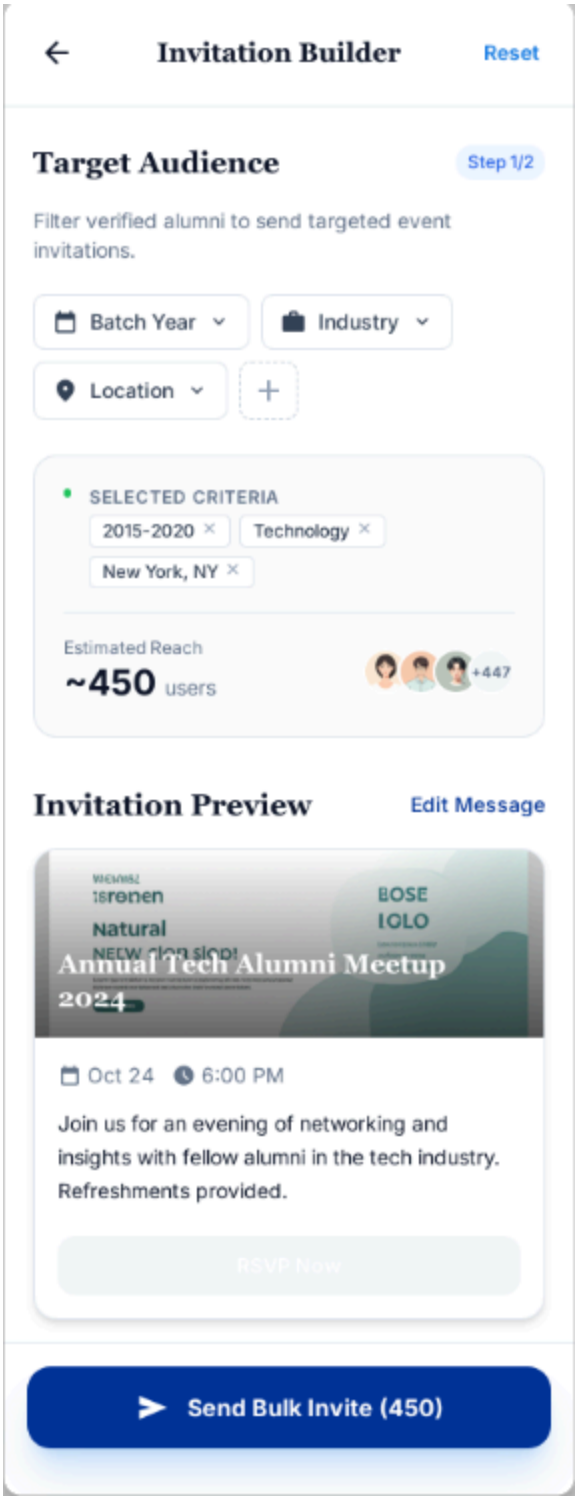
Missing important alumni events because notifications are unreliable and I forget to check scattered groups.	
Personalized event calendar synced to phone, smart notifications based on my profile preferences, never miss out again.	
As an alumni who wants to stay engaged with the community, I want a personalized event calendar with smart notifications based on my profile preferences, so that I never miss relevant alumni events and can easily manage my participation.	
Mobile app UI design for a 'Personalized Calendar' screen. The top contains a header with a back arrow and search icons, followed by a toggle switch for 'Month' and 'List' views. Below a sync setting, a clean white calendar widget displays a monthly grid with highlighted dates. The lower half features an 'Upcoming Events' list with clean, shadow-bordered cards. Each event card includes a date badge, title, time, location, and small attendee avatars. A prominent circular floating action button with a plus icon is in the bottom right. Minimalist and professional aesthetic, blue and white color scheme, with standard bottom navigation bar.	

Smart Notification Center
Bea Christina Cale
Alumni cannot access official services because there is no centralized alumni platform login.
A secure login allows verified alumni to access networking and event services.
As an alumni, I want to securely log in to the alumni platform so that I can access official networking and event features.
Act as a Senior UX Designer; design a mobile login screen for a University Alumni Networking & Events app including a university logo, email field, password field, login button, and a “Forgot Password” option with a simple, clean layout that proceeds to the Home Dashboard after successful login.



Targeted Invitation Build
Bea Christina Cale
Generic mass emails often lead to low engagement and "inbox fatigue," as alumni receive notifications for events that aren't relevant to their location or industry.
Precise filtering (by batch, industry, and location) ensures high RSVP rates and allows the university to track "Estimated Reach" before sending.
Story As an event coordinator, I want to filter the alumni directory by specific criteria so that I can send bulk invites only to the most relevant participants for a localized or industry-specific meetup.
Act as a Senior UX Designer. Design an 'Invitation Builder' screen for an alumni app. Include a 'Target Audience' section with dropdown filters for Batch Year, Industry, and Location. Display 'Selected Criteria' as tags and provide an 'Estimated Reach' counter with user avatars. Include an 'Invitation Preview' card showing the event banner, title, and details, and a primary button to 'Send Bulk Invite' with the total recipient count.



All-in-One Event Manager

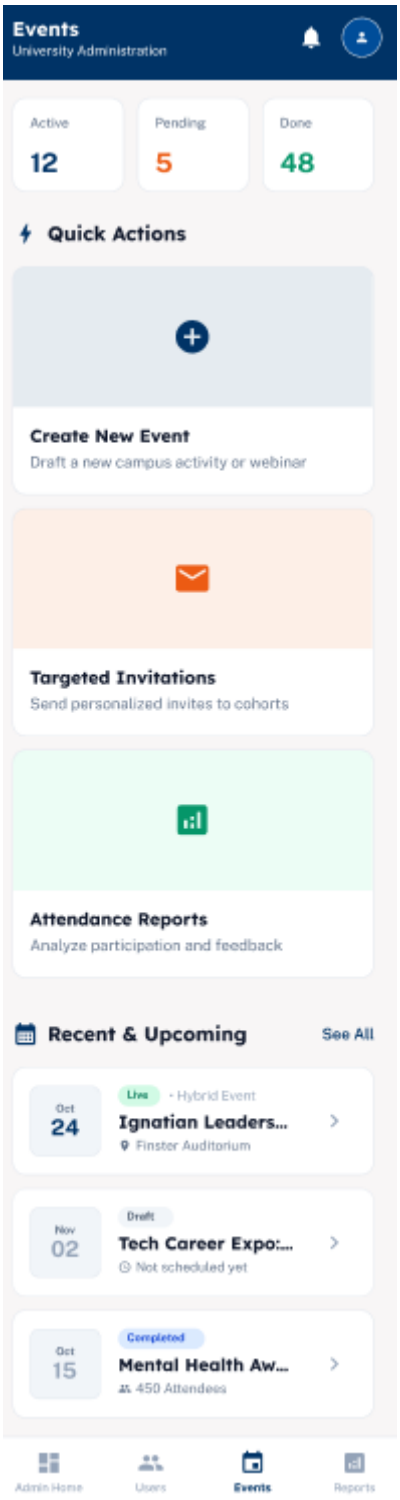
Josh Clarence Agulo

Event organizers struggle with fragmented tools for ticketing, guest verification, and event creation, leading to administrative delays and unverified attendees.

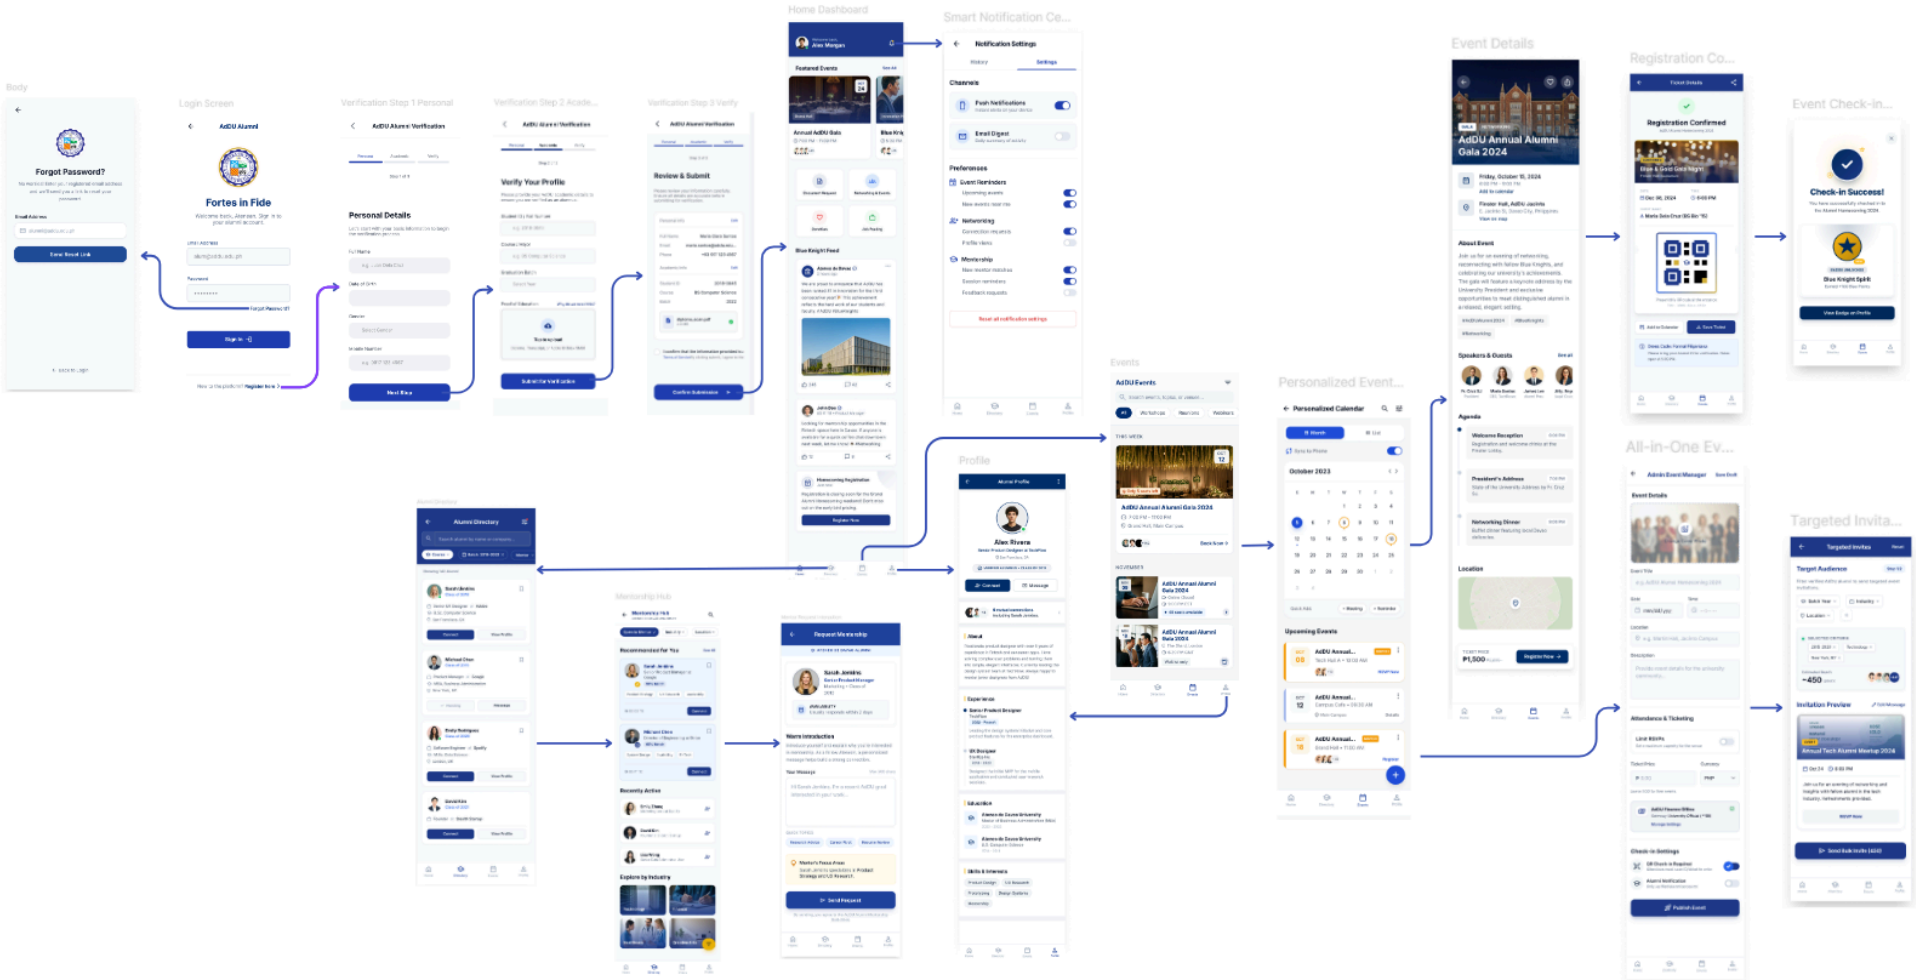
A centralized dashboard allows admins to create events, manage RSVPs, handle payments, and enforce QR-code check-ins all in one secure place.

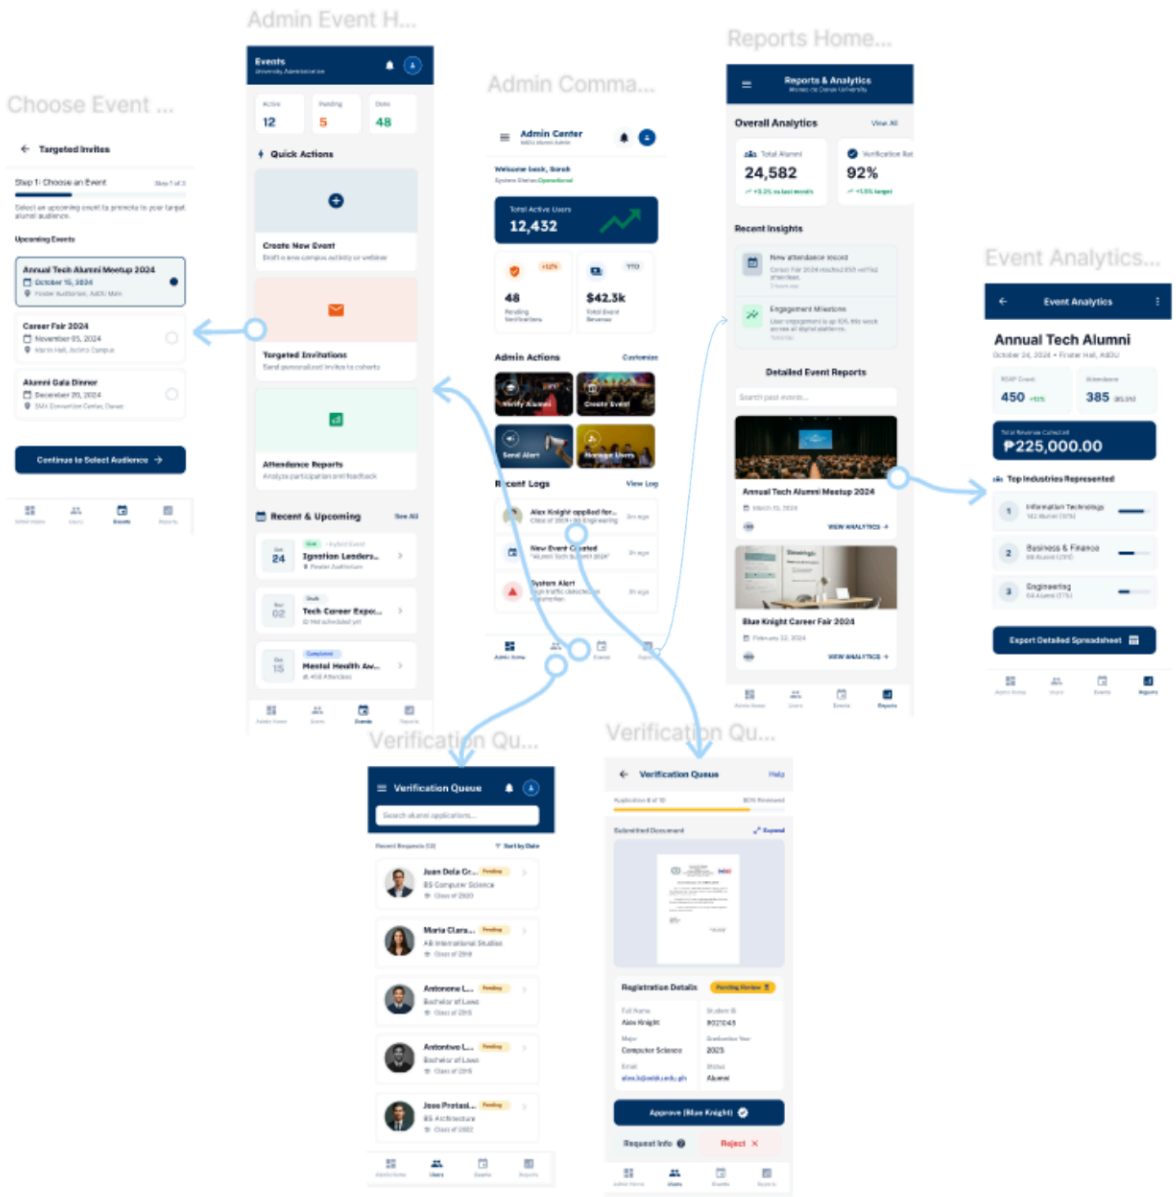
As an event administrator, I want to create and manage university events with integrated ticketing and verification settings so that I can ensure only verified alumni attend and streamline the check-in process.

Act as a Senior UX Designer. Design a mobile 'Admin Event Manager' screen for a university alumni app. The interface should be a comprehensive form including a cover photo upload, event title, date/time pickers, location, and description fields. Add a section for 'Attendance & Ticketing' with a toggle for RSVP limits, ticket price input, and a linked finance office gateway. Finally, include 'Check-in Settings' with toggles for QR code requirements and alumni verification, ending with a prominent 'Publish Event' button.



Summary for Alumni Persona:





Summary for Admin Persona:
